IAPMO San Diego Chapter

May 6th, 2014 minutes

16 attendees

11:45- Meeting called to order

Flag salute

Self introductions

Treasures report read & Approved

Minutes were read from the April meeting & accepted with minor spell changes

Old business

-CSST -How is the process for buying it at Home Depot / Lowes

-Tax Filing update

New business

-UL mark will be enhanced

-UMC tech committee accepted ventless dishwashers purposed

-flexible ducts limited to 5 feet with the exception of residential

-hand out on a (new / old) businesses
Presentation

The presentation was put on by Barbara Bradley with Advanced Onsite Systems, Inc.

Advanced Onsite Systems, Inc. provides engineering services for decentralized and onsite wastewater treatment, disposal, and recycling. Their projects are commonly located in California although they also serve other states. Their clients are typically small wastewater plants owners, i.e., public facility owners, multi-family residential properties of all types, and commercial property owners such as business complexes, shopping centers, and restaurants. They typically engineer small biomechanical treatment systems for wastewater flows from 3,000 to 100,000 gallons per day. The two types of wastewater are black water which is known as waste from toilets & kitchen and grey water which is waste from showers, laundry and wash basins. A few reasons why this should be considered, drought, population growth and climate change. Two important California codes that regulate the design of these systems are title 17 and title 22. Title 17 deals with cross connection prevention and Title 22 deals with the levels of recycled water - who is the end user, what the treatment process is and what the allow pollutants such.

Please feel free to contact Barbara for more information.
